

- AI Acceleration Strategy:

-

Our journey to becoming
AI-Native

• Imagine if you had **one** tool to....

 Validate broad market need	 Quantify impact and affected segments	 Diagnose issue root cause in seconds
 Identify top friction areas	 Capture site notes instantly	 Estimate feature adoption
 Size opportunity vs. benchmarks	 Accelerate PRD creation	 Prioritize with confidence
 Reveal segment-specific pain points	 Detect issues earlier	 Measure post-release impact
 Connect feedback to retention risk	 Separate product vs. enablement problems	 Preserve and search institutional knowledge
 Give leaders faster evidence for roadmap decisions	 Create stronger value propositions	 Drive outcomes that matter

• Why this pilot matters

AI-NATIVE PDLC OPERATING MODEL

1

UNIFIED CONTEXT

AI pulls context from all the sources product manually reviews today into one workspace.

2

BETTER DECISIONS

Decisions are structured, evidence-based, and attributable with clear rationale.

3

DURABLE MEMORY

Outputs are written back to the intelligence hub so context, decisions, and assets are never lost.

AI ORCHESTRATION: VISION FOR HOW THE MODEL WORKS

Current tools serve as memory layers, execution systems, alignment systems, but the AI Workspace for Product becomes the front door for product work.

AI-Native PDLC Pilot Roadmap

Proposal for piloting in phases across the product development lifecycle

i Each phase builds upon the previous one, driving value incrementally while maturing AI capabilities across the PDLC.

Phase 1 Phase 2 Phase 3 Phase 4
